

Total solid waste numbers for the first six months of 2016 are up 3.4% over the same period in 2015 with recyclables up 6.8%. MSW remain normal. Construction and demolition debris is down 10% and bulky waste up 63.5%, the combination of the two only up 13 tons over the same period in 2015.

*Note: June is an estimate*

Finished Water quality remains strong at all three treatment plants with iron and manganese levels well within our treatment goals. This is further evidenced by the relative lack of water quality complaints which we believe is a function of finished water quality and the effectiveness of the spring and fall flushing programs.

Water quantity pumped for May and June reflect the transition to seasonal activities in the Town. Despite the jump, the daily consumption is within the short-term pumping capacity of the Town's well fields and treatment plants. Stepped up enforcement of water restrictions is expected to contain the growth of consumption in July and August.
