

My family has a small construction company, myself and two sons, and two part time employees when needed, it was started by my father in 1947. We want to relocate the business closer to our home in the area. The company performs excavation, utility work, concrete, paving, and landscaping. We are requesting a special permit to allow using the property for truck, trailer, equipment parking, and job material storage. Materials include sand, stone, gravel, drain piping, pallatized brick and block, etc. Our normal schedule is Monday through Friday, We start at 7am, then leave for jobsite around 8am, return in afternoon. Winter schedule is emergency work or when weather allows. We don't advertise and almost all of our work is existing customer base and referrals mostly located in the metro Boston area where we have a small satellite yard, causing very little traffic at this location.
